

Roller Bed Trailer

Trailer Fleet Services from GE offers you an exclusive source to handle the challenges maintaining the life of your trailer fleet. And as a trusted supplier to the trucking industry for more than 50 years, you can have confidence in GE's long-standing experience.

Whether you need to buy, rent or lease additional equipment, insure or finance your assets, maintain operational performance, or gain critical data regarding their whereabouts with trailer tracking technology, we have a solution designed with you in mind.

Benefits

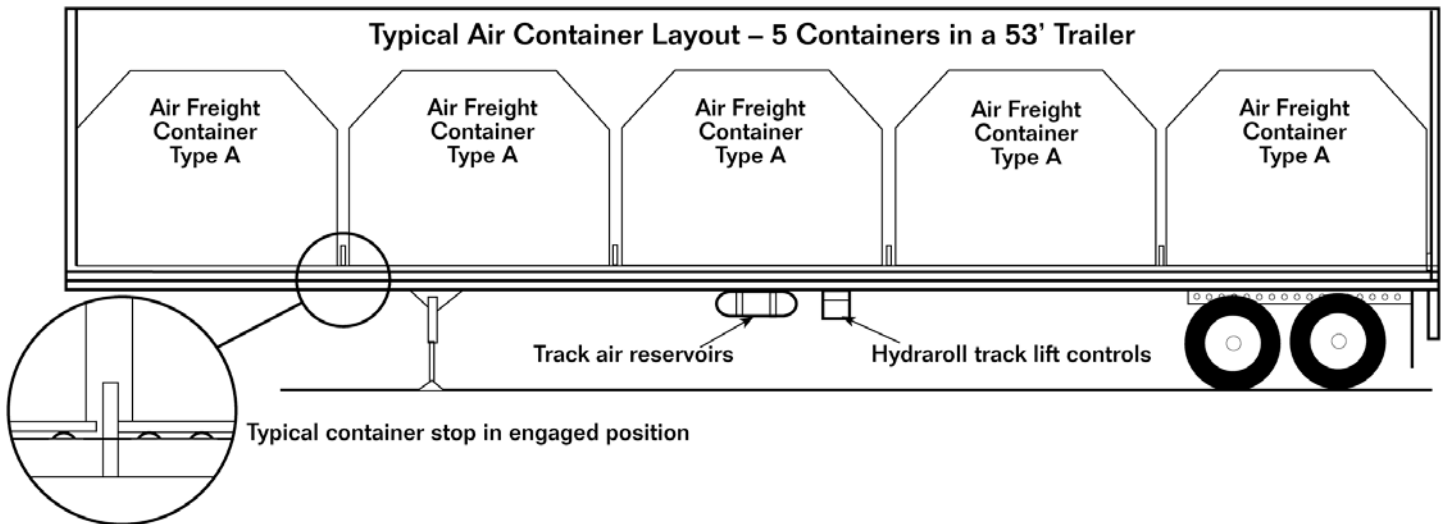

- > Better support and easier movement of various sizes of aluminum air containers
- > Containers remain on the floor while in transit, eliminating risk of product damage caused by a "live" roller system
- > Smaller openings in top plates to minimize forklift abuse during general freight load/unload operations
- > Supports air containers during transition from trailer to dock
- > Track isolation allows you to shut down a row of track while maintaining the rows operation
- > Rollers automatically lowered when emergency brakes are released
- > Manual flip-up safety stops keep each container in position during load/unload operation

Features

- > Six (6) rows of track
- > Retractable roller system
- > Two 2" wide rollers
- > 4.5"/6.5" roller centers
- > 5/8" roller lift above top plates
- > Track isolation valves

Roller Bed Trailer Specifications

Standard Specifications

- > Six rows of Hydraroll® pneumatic roller track, the worlds leader in roller bed equipped vehicles as supplied to the air cargo industry
- > 53' trailers are built to haul five 125" long containers
- > Five sets of manual flip up safety cargo stops are standard. A mandatory requirement by the overnight air freight carriers

Optional Specifications

- > Additional container stops
- > Temperature controlled environment kits
- > Closer roller centers for wood pallet options
- > Overhead doors
- > 48' length
